

Indeed Guide

Independent background workflow

Indeed, LinkedIn, and Google Careers use separate controls, queues, health states, and page logic. They can run at the same time in three open Chrome tabs. Closing Chrome stops all three.

1	Open the correct tab Open Indeed in desktop Chrome and choose a results page containing supported Indeed Apply jobs.
2	Start Indeed only Open Alomar Apply and press Start / resume inside the Indeed section.
3	Keep it running Keep Chrome and the Indeed tab open. You may switch to another tab while the background alarm keeps the runner connected.
4	Review and confirm Unknown required questions pause. Only an Indeed confirmation is counted as Applied.

Save and refresh your profile

Open Profile Setup, edit truthful contact and answer defaults, press Save, wait for the saved message, then press Refresh extension sync. Each runner reads the refreshed Chrome profile.

Safety: keep login, CAPTCHA, identity checks, unfamiliar required questions, and final review under your control. Page layouts can change, so pause and report any unmatched screen.
